Student Responses

Answer the following questions

Question 1

Comment out the `asm` line. Run the program again to see what would happen. What do you observe that happens differently than before :

The loop constantly prints out that it is coming out of the WFI but the timer appears to behave as before

Question 2

In terms of CPU power consumption, what difference does the `asm` statement make?

The processor is running instructions every cycle so the power consumption is at 100%
